/4009377 132 Dwellings off Sladbury's Lane Clacton (assumed)

I have noticed what appears to be a planning consent approach for a moderate sized residential development on a field bounded by Sladbury's Lane , Burrs Road and the land of Network Rail in Clacton.

I wish to make some constructive comment regarding problems such as this proposed development will create to the local road network.

It is very evident that the majority of the future possible two hundred and fifty or more residents and a likely one hundred and fifty commuting cars, vans and other light goods vehicles used by work-from-home craftsmen and maybe another two hundred or more daily delivery vehicles as well as fast food-to- doorstep. electric bikes, will mostly use the existing south section of the curvaceous, narrow and flood risk road of Sladbury' Lane . . . that departs from the Frinton Road and then passes the grass bowling club as it descends and bridges the short valley of Picker's Ditch as it heads northward towards the newly created roundabout serving Edwin Giles Way/Scythe Way.

The new residents/visitors will clearly use the brief but congested 0.6 mile route to the alternative six or more mile northward route via Little clacton on their frequent journeys to Clacton Rail Station, Hospital, Town Centre and other amenities, especially as the GPS traffic advice systems are likely to continue displaying the much. shorter route over Picker's Ditch and along the Frinton Road.

To encourage such residents to use Burr's Road will cause chaos as it is too narrow for two large saloon cars, or Transit size vans or SUV to pass safely and it will only be a matter of time before there is trouble or a potential disaster at the lightly gated, unmanned railway crossing where there is a risk of over-height vehicles fouling the high voltage overhead wiring, or cars with lowered suspension grounding on the prominent tail height or stressed or careless/dangerous drivers taking chances against the lightweight gates and colliding with an oncoming train,

There is a solution that will cause concern to a minimal number of households but to the benefit of many. It will necessitate the repositioning of the Happy Valley Bowls Club to a higher and drier position . . . but as the current club occasionally floods ,at a great expense of relaying the spoilt lawn, the move will surely be a benefit that its' members will be pleased of.

My plan is to build a relatively low cost and short 600 yard single lane link road between a new medium size roundabout replacing the current difficult triangle junction of Frinton Road and Sladbury.s Lane and joining up with a new roundabout at the current junction of the recently laid Marris Otter Lane and Edwin Giles Way/ Scythe Way. The short south hill of Sladbury,s Lane that now joins the triangle junction could be truncated as a cut-de-sac approached from the northern roundabout, much to the pleasing of its residents.

The only disappointment will be to a dozen or so properties that will lose some of their front gardens to a Frinton Road roundabout similar in size to the existing and effective roundabout at the junction of Frinton Road and Valley Road, just half a mile further westward toward the town, but the general

and expected increase in population over the recent decades make a busier Walton Road inevitable and expected by main road residents, albeit the move to electric cars and buses/commercial vehicles and speed controls may create a quieter and safer main road roadside.

There might be a suggestion to have access to the new development via a road junction in Burrs Lane near or adjacent to the rail crossing . . .this should be avoided at all costs, as we are all too aware of the very poor traffic flow and congestion that occurs so frequently at the similar and very difficult junction at the entrance to Frinton . . .through The Gates.

If the heavier traffic developed by the proposed development is avoided by the re-routing that I suggest, then I see no reason for it not to go ahead.
