

Planning Application 25/00855/FUL

20 December 2025

Dear Sirs

Subject – Planning application 25/00855/FUL

For the attention of Chloe Buckingham.

Thank you for the opportunity to respond to the above application. We have considered the details of the application and our response is detailed below.

We would like to object to the proposed development on the following terms:

- The proposal document refers to the previous refused applications and the new planning application does not address the proximity of the proposed building to the rear of 31 The Nurseries. It is difficult to get accurate measurements but the North West corner of the proposed property appears to be less than one meter from the boundary fence of 31 The Nurseries and even at its widest point is only approximately 1.9 meters from the fence line. This could impact any material use for the land at the rear of the proposed property and increase noise and privacy to the rear of our property.
- Similarly the North East corner appears to be approximately 1.25 meters from the rear fence line of 122 Cheltenham Road making access to the garden very narrow.
- This would suggest to us that the footprint of the proposed property seems to be too large for the available space. The access past the existing 124 Cheltenham Road garage appears narrow which could restrict access for vehicles making site clearance and new building difficult. A similar comment could apply to access for emergency vehicles. Additionally the space for turning of vehicles in the area immediately to the east of the proposed property does appear very restrictive.
- As mentioned above the proposed development is close to the properties in The Nurseries and the previous applications 21/01491/FUL and 22/00656/FUL being refused, for more than one reason but, one reason was the lack of light into the proposed property and that has not changed. I mention this as there are three Leylandii in the grounds of 31 The Nurseries which could be within less than 1 to less than 2 metres of the rear of the proposed development. Additionally, tree T7, as marked, is a poplar tree to the rear of 32 The Nurseries which is approximately 2.5 meters from the proposed property.
- There is an abundance of wildlife that inhabit the area under development including hedgehogs, squirrels and numerous species of birds that nest in the Leylandii in the ground of 31 The Nurseries.
- The application form makes no reference to any fencing to be erected along the western boundary of 124 Cheltenham Road. However, at the Bishops Cleeve Parish Council planning meeting the applicants stated the boundary being fenced by a 1800mm close boarded fence. That boundary, as shown on our deeds, is the responsibility of the properties on The Nurseries and there is a chain link fence already in place, the existing hedging being on the land of 124 Cheltenham Road provides privacy but is not the boundary line. The proposed fence should then be

Planning Application 25/00855/FUL

built on the land of 124 Cheltenham Road. If the fence is not built, then this would increase our concern on privacy into the rear of our property.

- The design of the building is out of character with the existing properties and would be like a shed being clad with timber when no other current building in the area is of such design.
- Whilst the details make no reference to heating methods we would have concern if there were air sourced heat pumps, or similar devices, at the rear of the building resulting in noise pollution to our premises. Although suggestion at the Parish Council meeting is that the heating method would be gas.
- Similarly we would be concerned about light pollution if flood lights are fitted to the rear of the proposed property.
- Our final point would be to the proposed elevation drawings where the scale and the marked distance from FFI to ceiling do not seem to match. Which is correct? That could impact our objections if the height of the proposed building is higher than expected.

The above points are based on the information available but due to the lack of detailed measurements of exact position, relative to boundaries and floor level relative to the properties on The Nurseries, some of the measurements are assumed, but are as accurate as we can be.

Yours faithfully
